Number of hours :

Lecture : 8.00

Teacher(s) :

PHALIPPOU Marc

Title :

Introduction to project management

Abstract :

This course presents the basic concepts and techniques of project management, which must be part of the core skills of any engineer. The course aims to develop the following skills:

- decide whether action should be controlled in project mode
- identify project stakeholders, their role, use the appropriate vocabulary
- define a project, its structure
- estimate costs, project planning, monitoring progress
- analyze and manage risks

Prerequisite :

None
